Quadraspire

At Quadraspire we are music lovers. We would like everyone to get the most out of their HiFi systems and enjoy the thrill of live or studio music in their homes. We strongly believe this is possible with the right set up including the right support for your HiFi, whether it be one of our HiFi racks or QPlus supports. All HiFi components, whether or not they have moving parts, can produce and absorb energy that can have a detrimental effect on sound through noise interference. We have researched the impact that different materials and shapes have on resonance and sound. As a result, our HiFi racks and QPlus supports use materials that have lower resonance levels and where possible use the innovative Quadraspire curve to avoid the parallel lines that encourage standing waves. This helps to filter out interference, reducing the noise floor and opening up the soundstage so the music more accurately reflects the original recording. All our HiFi racks are modular and flexible to accommodate a wide range of 'HiFi systems. Quadraspire products are designed and made at our own manufacturing plant in Great Britain and sold around the world.

QPLUS

Whether your HiFi is situated on a piece of furniture or inside a cabinet the QPlus support will reduce resonance in the same way as one of our HiFi racks. This helps to reduce the noise floor, opening up the soundstage and improving dynamics making the music more enjoyable.

QPLUS Evo

QPLUS Evo
with REGA P2.

QPLUS Advanced

QPLUS Advanced
with DEVIALET
Amplifier.

QPLUS Reference

QPLUS Reference
with REGA RP10
Turntable.

Q4 EVO

Q4 Oak shelves
with 19mm silver
columns and spike feet.

ENGINEERED
FOR SOUND

The original modular HiFi rack, launched in 1995, supports a wide variety of HiFi systems and reduces resonance to deliver a clearer, cleaner musical performance. The solid bamboo or wood veneered shelves with the distinctive Quadraspire curve make this an attractive rack as well as offering a variety of finishes to fit most interiors. The addition of a Q4 bronze upgrade to the top shelf will further improve the sound performance.

SVT

SVT Bamboo shelves
with SV silver columns
and spike feet.

ENGINEERED
FOR SOUND

The SVT was developed for even better sound performance and larger HiFi systems. The SV columns have the distinctive Quadraspire curve to reduce mass and eliminate the parallel lines that encourage resonance. The vents in the SVT shelf further reduce mass as well as helping air to flow freely around the components. Like the Q4 there is a bronze upgrade available for the top shelf of the SVT.

X REFERENCE

The X Reference combines the technology of the SVT rack and the SV bronze upgrade to effectively create a rack within a rack making the entire system more musical. Each SVT shelf and bronze upgrade is sited on a large X shaped shelf that in turn is supported by large SV columns to give additional strength and rigidity. The principal of the Quadraspire curve is taken to extremes in the X shelf and its special Nextel coating helps to further improve sound.

Right Bamboo shelves
with black columns
and bronze spike feet.

WALL BRACKETS

The Q4 & SVT Wall Brackets, made in Bamboo and provide a rigid support for your main source component.

Q4 WALL BRACKETS

Black bamboo wall bracket with Q4 EVO Black shelf and black feet.

SVT WALL BRACKETS

Bamboo wall bracket with SVT shelf and bronze upgrade.

SPEAKER STANDS

Our design principles of curves combined with a light but rigid construction have been employed in developing the Q6014 speaker stand. A bamboo centre column firmly joined to a solid base and top plate offer a very natural and open sound. Gentle curves and a laid back stance make it very easy for close wall proximity. For speakers with a larger footprint the Q6018 will offer better stability. An all black version is also available.

Q60 SPEAKER STAND

- » Speaker stands 600mm (24") tall, available in Bamboo or Black finish.
- » Speaker stands supplied with choice of spikes and bump-on feet.

FLOOR PROTECTORS

Both QC and QX7 floor protectors are machined from solid Stainless Steel. Not only do they protect your floor from the spikes on your rack or speakers but they enhance the sound performance of your system.

QX7

QC

Q4 & SVT BRONZE UPGRADE

SV BRONZE UPGRADE

Improved performance for source components.

Beautiful bronze engineering.

Adjustable spiked assembly for finer levelling.

CABINETS

LP QUBE

HIFI QUBE

CD QUBE

Features

- » Qubes available in Cherry, Oak, Maple, Wenger or Black.
- » Optional feet and doors available.

Quadraspire

SOUND

Eddie Spruit, the founder of Quadraspire, developed a rack to address the issue of component resonance having noticed how the siting of his HiFi made a difference to how good it sounded. In 1995 Quadraspire launched the Q4 HiFi rack that is still sold around the world today.

DESIGN

To further improve sound performance the design team, led by Alester Kells, research & listen to different materials and shapes using the tried and tested technique of tuning by ear, in the same way that the finest musical instruments are developed.

ENGINEER

Our design ideas, such as the X Reference and the QPlus, are brought to life by our product engineer, Ian Sibley. He also oversees the making and finishing of every Quadraspire product ensuring that precision is maintained throughout.

QUALITY

All products are made at our own factory in Hallatrow, near Bath, Great Britain, where we use the latest technology to make all the wood and metal components. Critical to our success is ensuring that all products are made to the highest standard.
